

Project 4: HTML and CSS

2024 Olympics Venues

Detailed description of the project assignment

For this assignment, the France 2024 Summer Olympics Ultimate Vacation Company is a Vacation Travel Agency whose main goal is to promote the Olympic Games in Paris, France. Your task is to create a website to promote a package for 2024 Summer Olympics. Paris, France's capital, is a major European city and a global center for art, fashion, gastronomy and culture. For this assignment, you will design a website that you can effectively use to encourage families to come to Paris during the 2024 Olympic Games to see not only the Olympic events, but also some of the many attractions that Paris has to offer.

One of the first things you have to decide is the length of the trip offered (minimum of 3 days) and the number of people that are in the family (minimum of 3 people per family). No marks will be given or taken away based on how many days you choose or the number of people you choose per family. This assignment will be marked based on a number of requirements that your website must contain.

You will use the HTML file as a template to create **four (4) HTML files**: index.html, hotels.html, entertainment.html, and competition.html. The mystyle.css file is used to control the format of these 4 HTML files. You will also have to alter some pictures using a program called GIMP or iPhoto, and post them on your website.

Each webpage will be divided into **three (3) sections**: the header, the link bar, and the main text area. The header will include the name of the Olympics and a custom image background. The link bar will include links to each of your webpages as well as two external links (e.g., google.ca) or links relate to Olympics venues. The main text area will include the unique content of each page.

- **index.html** will welcome people to your website, and provide some information about your website. This also includes at least one possible version of an itinerary that the family would experience. An example of this will be shown in the example provided.
- **hotels.html** will give information and pictures about the hotels that you choose to include in your vacation package. The family selecting the vacation package will be able to choose from a list of hotels in the Paris (must research at least 2 hotels). Some of the research about each hotel can include the “pros and cons” of each hotel,

what the rank of each hotel is, the location in respect to the Olympic events, etc. For each hotel, include at least one picture of some part of the hotel.

- **entertainment.html** will provide at least two entertainment events. Make sure that you include a variety of entertainment events. Some of the events that can be used are: theatres, tubing, concerts, tours of Monuments/ Buildings, tours of art galleries, tours of Museums, etc. You may decide to include some pictures that help describe each of the events. Include a brief description of the form of entertainment.
This page needs at least 4 pictures: 2 original pictures and 2 edited pictures. The edits have to be obvious for the marker to see. Include on this page a short list of the edits you made to each image.
- **competition.html** will provide at least two lists of events that will be chosen by the family. Each list should include at least three competitions. Each of the competition should be included with a brief description of the competition. The lists should include a mixture of the different sports that the Olympics offer.

All sources that have been used (contents and images) need to be cited using APA citation at the footer of each page. You are also required to include at least two animated images throughout your website. They can be used for links to other websites, decoration, or used to demonstrate an example. It is strongly recommended that you look in the Labs section of the course website for information on how to complete this assignment.

Additionally, you are NOT permitted to use Adobe Dreamweaver, Microsoft FrontPage or any other webpage creating program. A plain text editor is all that is required.

On the index.html page, you will have an itinerary. You will also include the price for the package outlined in the itinerary (price in total). The price can be any amount.
